

Lab 8

CST 205

Task 1

Do (brief) online research to find an interesting API. (Try to find one that does not require authentication.) A good resource is [RapidAPI](#).

Provide the name of the API and a brief description (in your own words) as a comment in a file called `lab8.py`.

Task 2

Try to create a basic example of the API you chose using Python and the Requests library. Add this code to `lab8.py`.

Task 3

Build upon our NASA APOD example to create a Qt application that displays an image from NASA. Create this example in a file called `lab8_qt.py`.

Deliverable

Submit `lab8.py` and `lab8_qt.py`.
